

## #1244: MotionView - Archiving Model

**Product:** MotionView

**Product Version:** MotionView 2017.1 and above

### Topic Objective

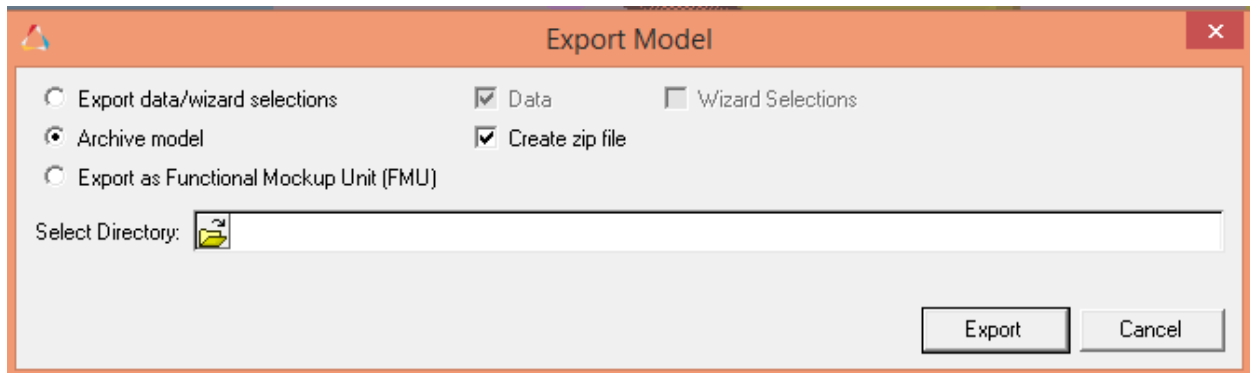

Saves model and related files which makes easy to share

### Topic Details

MotionView now offers the ability to create an archive of the model collecting all the needed reference files along with the MDL at a given location. This capability helps the user while sharing the model saving the effort of collecting the reference files and changing path references in the MDL.

- An archive folder is created at a given location with a new mdl saved in it
- All files referenced by the model (Except files from the install) is copied into the folder
- All path references in the copied mdl is removed so that the references are local to the mdl
- An option is available to zip the content upon creation

Use the File > Export > Model to archive the model.

This makes easy to share the model files with all related graphics files in a single folder.
